# **WHAT I THINK PLAINSBORO WILL BE LIKE** **IN 100 YEARS**

Have you ever imagined how will our home town look like after a hundred years!!It is a very good feeling to close your eyes and just go in to the future.In my imagination, the future of the Plainsboro will be awesome!!

Plainsboro will develop very strong in terms of technology and so if we think according to present scenario everything in the town will become magical.People will be able to do all the chores of their day to day life by just clicking a few buttons or even through their voice commands.As till then Plainsboro will have robots and artificially intelligent technology driven systems installed everywhere in the town.This reminds me of the fairy tales I used to listen in my childhood where fairies can fulfil all their commands by just spelling a cast on their magic wands.

All the roads in the town will be well lighted at night which will use solar powered batteries and so energy will be saved.The cars in the town will also be running either through solar powered batteries or electricity so that no harm to the environment will be caused due to pollution (which is caused by gasoline powered cars in present).Also the cars will have artificial intelligent system to drive us to our destinations only by giving few voice commands.Such cars will be very smart cars and will have all the necessary features to avoid any kind of accidents on road and they can also detect any deer or any animal coming towards them from far away so that it can stop at a proper timing and hence animals lives will also become safe.People in the town will also use the flying feature of these cars when they are in hurry to bypass the other cars on their way.....will not it be awesome!!

Plainsboro will have Robots everywhere to do the jobs like cleaning in the communities ,providing security to the residents by proper screening ,helping the old people and children as crossing guards.These robots will be so smart that they will also be able to detect any person or place in case of emergency like fire or accident in their area and will be able to reach there within seconds by flying and providing appropriate help.Such robots will make my town the safest and happiest place in the whole world....will not it be very great!!

All the community parks in the town will have intelligent security system which will keep track of all the people and their activities present in the park every moment which will take the crime level to a zero point and security level to the highest point. This will make my town the best place to live in the whole world.

Another important aspect is the food that we eat: in my future imagination Plainsboro will have most of its farm using hydroponic method of agriculture where crops will be grown in warehouses lit by red and blue LED's with trays stacked up to ceiling and grow all days and every hour during the whole year which will again result in a healthy community and zero loss to the environment in terms of insecticides and pesticides.

All the public places in Plainsboro will be installed with such smart medical devices that they are able to detect if the someone in the area has any medical condition or

allergy symptoms and can also provide the first aid on the spot or direct to the hospital if further needed. This will also keep each and everyone in the town safe and healthy all the time.

People in the town have cars which can go on their own and can shop and bring home all the grocery in the list feeded in it for the whole week so families can get personal time to spend with family members rather than keep on wasting time on household chores. This will make people and children more happy and all will feel more loved.

This is how Plainsboro of my imagination will look like in coming 100 years where happiness , health ,wealth ,safety ,satisfaction and love with a strong touch of technology will be there and there will be no hatred among the people as they will be so busy fitting their own life in to advancement of technology every minute and will enjoy the fresh breeze of a more clean and pure nature.
